Creamy Velvet White Body Butter

Janice Ferrante

www.handmadesoap.ca

www.skincarenaturals.com

- 60g virgin coconut oil
- 15g monoi de tahiti
- 15g squalane
- 10g vegithix
- 50g organic refined shea
- 12g white beeswax beads

Melt beeswax over a double boiler. Turn off burner but leave your melting pot in the water.

Stir in Vegithix to melt. Remove pot from heat (water).

Stir in organic Refined Shea butter and Squalane.

Stir in Virgin Coconut Oil and Monoi de Tahiti.

Mix thoroughly as it cools. Pour into containers while still pourable but mix as long as possible (this will help prevent grains)

SCENT OPTIONS : This recipe doesn't need any scent added to be gorgeous, but if you are feeling the need to try something different, here are a few that worked for me.

Vetiver: I used 60 drops.

Rosalina: I used 96 drops.

The above amounts are based on 120 grams of base. I actually split it into 4 groups of 28 grams to experiment with, so the actual drops were 14 vetiver/28 grams base and 24 drops rosalina/28 grams base.

The rosalina is about 5%. This is fairly high, generally this percentage is used in therapeutic applications and sometimes perfumes. You can reduce either one to your liking, I was in the mood for scent :0) And the monoi and virgin coconut are also quite strong so it took more essential oil than it normally would have to detect the scent to my liking.

If you are going to be using this often over large amounts of your body, it might be a good idea to reduce the percentage.

You can get all the ingredients and more at <http://www.skincarenaturals.com>
